Smart Grid Cyber Security

Risk Management, Equipment Protection, Monitoring and Incidence Response, Policy/Planning, and Access/Audit

As utilities around the world have initiated major smart grid infrastructure upgrades over the past several years, cyber security has become a critical priority. Security measures are designed to protect the electrical grid from attacks by terrorists and hackers, as well as strengthening its resilience against natural disasters and inadvertent threats such as equipment failures and user errors. The focus on cyber security has increased in recent months, spurred in large part by the U.S. Department of Energy's smart grid stimulus programs, the standards initiatives of the National Institute of Standards and Technology (NIST), and key priorities promoted by the Federal Energy Regulatory Commission (FERC).

However, despite the increased emphasis, the lack of interoperable cyber security standards continues to be a major issue. Pike Research's analysis indicates that many utilities are highly focused on finding end-to-end cyber security solutions across a variety of smart grid application areas and geographies, as cyber security is viewed as a cross-cutting feature of smart grid deployments. This need for end-to-end solutions has opened new market opportunities for systems integrators and framework developers to collaborate with traditional utility industry players, including metering and transmission and distribution (T&D) infrastructure vendors. This intense focus is stimulating the development of a robust new smart grid cyber security sector, which Pike Research forecasts will increase from \$1.2 billion in 2009 to \$3.7 billion by 2015. Over the next five years, we anticipate that approximately \$21 billion will be invested in global smart grid cyber security deployments.

This Pike Research report analyzes smart grid cyber security market trends in terms of business drivers, technologies, standards, objectives, and business requirements. The report segments the cyber security market by five major smart grid application areas: transmission upgrades, substation automation, distribution automation, electric vehicle management systems, and advanced metering infrastructure (AMI). It also covers five key cyber security categories: policy/planning/awareness, equipment protection and configuration management, monitoring and incidence response, access/audit/integrity, and risk management. The report includes profiles of key industry players and detailed market forecasts for world regions, segmented by application, through 2015.

Key questions addressed:

- What is the impact of cyber security in utility smart grid deployments?
- What are the cyber security objectives and requirements in the key smart grid application areas?
- How will cyber security markets grow in various smart grid applications and global regions?
- How, when, and which cyber security technologies be deployed in smart grids?
- What are the key policy, technology, and standards impacting the Smart grid cyber security market evolution?

Who needs this report?

- Electric utilities implementing smart grids
- Transmission and distribution vendors
- Advanced Metering Infrastructure hardware and software vendors
- Traditional networking and telecommunications vendors
- In-home energy management and automation vendors
- Meter and communications components suppliers
- Clean technology and communications investors
- Government and energy policy makers
- Standards development organizations
- Investor community

Table of Contents

1. Executive Summary

- 1.1 Smart Grid Cyber Security Market Overview
- 1.2 Smart Grid Cyber Security Market Forecasts
- 1.3 Cyber Security Standards

2. Market Issues

- 2.1 Smart Grid Investment Grants and Demo Projects
- 2.2 Global Smart Metering or AMI Deployments
- 2.3 Grid Control
- 2.4 Demand Response
- 2.5 Customer Energy Management
- 2.6 FERC Smart Grid Policy
- 2.7 NERC CIP Requirements
- 2.8 NIST Smart Grid Standards Conformance
- 2.9 Increased Vulnerability
- 2.10 Asset Management

3. Smart Grid Cyber Security Applications

- 3.1 Introduction
- 3.2 Transmission Upgrades

3.2.1 Real-Time Normal Transmission Operations Using EMS Applications and SCADA Data

3.2.2 EMS Network Analysis Based on Transmission Power Flow Models

3.2.3 Real-Time Emergency Transmission Operations

3.2.4 Wide-Area Synchrophasor System

3.2.5 RTO/ISO Management of Central and DER Generators and Storage

3.2.6 Additional Cyber Security Issues in Transmission Upgrades

3.3 Substation Automation

3.3.1 Distribution Automation within Substations

3.3.2 Distribution Automation Using Local Automation

3.4 Distribution Automation

3.4.1 Distribution Automation within Substations

3.4.2 Distribution Automation Using Local Automation

3.4.3 Distribution Automation Monitoring and Controlling Feeder Equipment

3.4.4 Fault Detection, Isolation, and Restoration

3.4.5 Load Management

3.4.6 Distribution Analysis Using Distribution Power Flow Models

3.4.7 Distributed Energy Resource Management

3.4.8 Distribution Planning

3.5 Electric Vehicle Management Systems

3.5.1 Customer Connects Plug-In Hybrid Electric Vehicle to Energy Portal

3.5.2 Customer Connects PHEV to Energy Portal and Participates in 'Smart' Charging

3.5.3 PHEV or Customer Receives and Responds to Discrete Demand Response Events

3.5.4 PHEV or Customer Receives and Responds to Utility Price Signals

3.6 Advanced Metering Infrastructure

3.6.1 Meter Reading Services

3.6.2 Prepaid Metering

3.6.3 Revenue Protection

3.6.4 Remote Connect/Disconnect of Meter

3.6.5 Outage Detection and Restoration

3.6.6 Meter Maintenance

3.6.7 Meter Detects Removal

3.6.8 Utility Detects Probable Meter Bypass

4. Technology Issues

4.1 Use Case Analysis

4.2 Risk Management

4.3 Vulnerability Analysis

4.3.1 Vulnerability Reduction

4.4 Threat Agents

4.5 Impacts

4.6 Security Architecture

4.7 Standards Assessment

5. Key Industry Players

5.1 Accenture

5.2 BAE Systems

5.3 Boeing

5.4 Certicom

5.5 Cisco

5.6 Electric Power Research Institute

5.7 IBM

5.8 Idaho/Sandia National Labs

5.9 Industrial Defender

5.10 InGuardians

5.11 IOActive

5.12 Lockheed Martin

5.13 N-Dimension

5.14 Northrop Grumman

5.15 Raytheon

5.16 SAIC

5.17 Subnet Solutions

5.18 Waterfall Security

5.19 Wurldtech

6. Market Forecasts

6.1 Introduction

6.2 Forecast Methodology and Key Assumptions

6.3 Worldwide Smart Grid Cyber Security Market

6.4 Smart Grid Cyber Security Market for North America

6.5 Smart Grid Cyber Security Market for the United States

6.6 Smart Grid Cyber Security Market for Canada

6.7 Smart Grid Cyber Security Market for Europe

6.8 Smart Grid Cyber Security Market for Asia Pacific

6.9 Smart Grid Cyber Security Market for Latin America

6.10 Smart Grid Cyber Security Market for Middle East/Africa

6.11 Smart Grid Cyber Security Market for Transmission Upgrades

6.12 Smart Grid Cyber Security Market for Substation Automation

6.13 Smart Grid Cyber Security Market for Distribution Automation

6.14 Smart Grid Cyber Security Market for AMI

6.15 Smart Grid Cyber Security Market for Electric Vehicle Management Systems

7. Company Directory

8. Acronym and Abbreviation List

9. Table of Contents

10. Table of Charts and Figures

11. Scope of Study, Sources and Methodology, Notes

List of Charts and Figures
